

Two galvanised chassis systems, one robust solution

Intelligent engineering

10 year warranty on all Willerby galvanised chassis solutions

High-end holiday home models from the Willerby range already benefit from the inclusion of the market-leading heavy duty galvanised chassis system. Willerby has now taken another major step forward and upgraded all other models to include fully galvanised Fusion chassis systems*.

(with the exception of the Magnum*)

As part of a programme of continual product development and a commitment to introduce innovative new features, the twin axle heavy duty chassis has been incorporated into the design of the Vogue, Meridian Lodge and Aspen models. This highly engineered, robust chassis continues to prove itself in the most testing environments and under the most extreme weather conditions.

Fusion combines innovative design with engineering expertise, and by adopting new techniques and processes is revolutionising the holiday home market.

Fusion is a highly engineered precision bolted steel chassis designed specifically to handle the rigours of transport and siting as well as reducing maintenance costs throughout its lifetime.

The galvanised version of the Fusion chassis adds advanced anti-corrosion properties and also provides you with the additional reassurance that comes from a 10 year warranty.

Reducing the impact on the environment during the manufacturing process played a significant part in the development of this new product. Fusion totally eradicates the need for welding, thus having a dramatically positive effect on associated fumes and working conditions. Fusion complies with NCC standards and is manufactured in accordance with ISO 9002 and 14001.

*Innovative chassis solutions.
10 year warranty.
100% peace of mind.*

*Excludes Magnum chassis solutions which are covered by the 5 year structural warranty scheme as standard. (Fully galvanised 'Fusion' chassis systems are available as an optional extra).
